

BAKED TYPE AROMATIZING COMPOSITIONS

ABSTRACT

5 A process for the preparation of aromatizing compositions suitable for the
biogeneration of mixtures of compounds that are able to develop or enhance a typical
baked type aroma upon heating of bakery products such as bread and the like. These
process includes the bioconversion of at least two amino compounds and at least one
reducing sugar in the presence of a yeast. The invention also provides an aromatizing
10 composition, a dough containing the same, and methods for imparting an improved baked
type aroma to dough products that are to be baked.
